StreamElements
Alert Widget

1-Click Install
Your own overlay copy

4 Speeds
Normal by default

Quick Start

StreamElements Alert Widget

Install to StreamElements →

1 **Install your own copy**
Open the button above, sign in with StreamElements, and choose `Install overlay`. Open the new Flip Phone alert overlay in your dashboard.

2 **Customize your phone**
Select the `Custom Widget` layer and expand `Settings`. Adjust the phone label, event colors, scale, or animation speed. Click `Save`.

3 **Add the overlay to OBS**
Use `Copy overlay URL` in StreamElements. In OBS, add a `Browser Source`, paste your private overlay URL, and set its dimensions to `1920 x 1080`.

4 **Send a test alert**
Under `Phone | Test`, choose a `Test event`, then click `Test phone alert`. Also try StreamElements `Emulate` for follows, subscriptions, tips, cheers, and raids.

Placement: The phone layer starts at 480 x 768 inside a 1920 x 1080 canvas. Position it in StreamElements. Keep enough room for the phone to enter, open, close, and leave.

Before going live: Leave Preview live on stream off unless you intend to send tests to OBS. The phone stays hidden between alerts. Sound starts off.

Complete your set: claim the matching piece with email signup. See the cover.

Make it yours

All controls are in the selected Custom Widget's Settings. Save after making changes.

ANIMATION SPEED

Slower	Normal	Fast	Faster
0.75×	1.25×	1.5×	1.75×

Normal is the default. These are playback rates: higher is faster. Speed changes the entrance, flip, reading pause, scrolling name, and exit. The gap between alerts stays unchanged.

Phone | Alerts

Turn alerts on or off. Set the reading pause before speed adjustment (default 5 seconds), gap (1 second), queue limit (12), horizontal and vertical position, and popup scale.

Phone | Events

Toggle follows, subscriptions (including resubs and gifts), tips, cheers, and raids. Set minimum bits or raiders and a separate accent color for each event. Legacy host alerts start off.

Phone | Motion

Choose Slower, Normal, Fast, or Faster. Reduced motion follows your system preference by default; you can also choose On or Off.

Phone | Colors and Phone | Text

Adjust the alert text color and the phone's outer label. Event names and details come from StreamElements; they are not custom wording fields.

Phone | Sound

Alert sounds start off. Turn them on for built-in chimes, or choose custom sounds per event. Adjust volume and test browser-source audio in OBS before streaming.

Phone | Test

Choose Follow, Subscription, Tip, Cheer, Raid, or Long name, then click Test phone alert. Long names scroll and may extend the reading pause so they can be read.

Troubleshooting & Support

COMMON ISSUES

No phone showing?

The phone is hidden between alerts. Check Alerts enabled and the event toggles, then click Test phone alert. Ordinary chat messages do not trigger this alert widget.

Motion looks different or text needs more time?

Restore Normal speed and check Reduced motion. Increase Reading pause for longer viewing time. Long names can automatically stay on screen longer.

Phone cut off?

Restore the 480 x 768 layer size and 1920 x 1080 OBS source. Reduce Popup scale or move the layer away from the canvas edge.

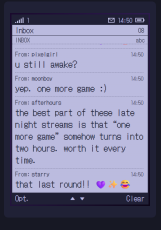

No sound or duplicate alerts?

Sound is off by default. Enable it and check the OBS browser-source audio and mixer. Keep only one copy of this alert active for each event.
