Quick Start

StreamElements Alert Widget

Install to StreamElements →

1 **Install your own copy**

Open the button above, sign in with StreamElements, and choose `Install overlay`. Open the new Café Order Ticket overlay in your dashboard.

2 **Customize your ticket**

Select the `Custom Widget` layer and expand `Settings`. Edit the café text, sections, colors, event wording, or animation speed. Click `Save`.

3 **Add the overlay to OBS**

Use `Copy overlay URL` in StreamElements. In OBS, add a `Browser Source`, paste that URL, and set its dimensions to `1920 × 1080`.

4 **Send a test alert**

In the editor, use `Preview → Preview subscription` or `Emulate` for follow, subscription, tip, cheer, or raid events. Enable `Preview live on stream` only when you intend to send tests to OBS.

Placement: The widget layer starts at 420 × 520 inside a 1920 × 1080 canvas. Move it in StreamElements to position your alerts. The paper starts cream, with a transparent background.

Complete your set: claim the matching piece with email signup. See the cover.

Make it yours

All controls live under the selected Custom Widget's Settings. Save after making changes.

ANIMATION SPEEDS

Slow	Normal · default	Fast	Faster
7.20 sec	4.32 sec	3.60 sec	3.09 sec

Times include feed, reading pause, tear, and exit at the default 2.4-second reading pause. Changing that pause changes total duration.

Layout & motion

Choose speed, reading pause, gap, queue limit, paper width, top spacing, alignment, or reduced motion.

Receipt

Edit café name, mark, subtitle, order number, terminal label, and footer. Toggle the header, stub, order, event title, detail, message, barcode, dividers, torn edges, and footer.

Colors & typography

Change paper, ink, divider, and event-heading colors. Keep the background clear or choose Solid with a color and opacity. Set the font and header, name, and detail sizes.

Events & wording

Enable individual events and set minimum cheer or raid amounts. Edit titles and detail templates for follows, subs, gifts, tips, cheers, raids, and legacy hosts.

Sound

Sound starts off. Enable original café chimes or add your own HTTPS sound URLs, then adjust volume. Test sound in OBS with its audio mixer unmuted.

Preview

Preview subscription sends one ticket. Clear active and queued alerts immediately clears the paper and waiting alerts.

Template words: Keep supported tokens such as {name}, {amount}, {months}, and {recipient} where you want event values to appear.

Troubleshooting & Support

COMMON ISSUES

No ticket showing?

The alert is invisible between events. Check the master switch and event toggles, then try Preview subscription. Ordinary chat messages do not trigger this widget.

Motion looks different?

Normal is the default. Reduced motion can be enabled in the widget or your operating system. Increase the reading pause if viewers need more time.

Paper cut off or background visible?

Keep enough layer height for the paper to leave the screen. Restore the 420 × 520 layer size, reduce text sizes, or reduce paper width. Background mode Clear restores transparency.

No sound or duplicate alerts?

Sound is off by default. Enable it and test in OBS; check browser-source audio and mixer volume. Keep just one copy of this alert active for each event.

Need Help?

If you run into any issues not covered above, reach out and we'll get you sorted.
